

Model Performance Test

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	data_rendered_properties_A2 20 fields 1270 rows 100 rows Name data_rendered_properties_A2 Field Type Field Name Physical Table Role Category data_rendered_properties_A2 Category catg... Action(Region En) data_rendered_properties_A2 Calculation Calc... Country data_rendered_properties_A2 Country country Region En data_rendered_properties_A2 Region En region... Unique Number data_rendered_properties_A2 Unique Number unique... Is No data_rendered_properties_A2 Is No is_no Res (Is) data_rendered_properties_A2 Res (Is) res_is Category data_rendered_properties_A2 Category catg... 		Successfully imported UNESCO dataset with fields including Name_en, Country, Region, Danger, Date_inscribed, and more. Data is correctly displayed in Tableau and linked to visualizations
2.	Data Preprocessing	Removed missing/null values, ensured data types (dates, strings, boolean) were correctly set, and added calculated fields such as year extraction from Date_inscribed. Filtered out redundant columns. Number of rows after cleaning data:1121
3.	Utilization of Filters	Implemented filters on Country, Region, Danger Status , and Year . Filters are interactive and applied to all visualizations for dynamic exploration.

		 The screenshot displays a Power BI dashboard with three main visualizations. The top visualization, 'TOP 20 REGIONS BY AREA', is a world map showing the top 20 regions by area, with labels for North America, Europe, Asia, and Australia. The middle visualization, 'Regions by Heritage ended', is another world map showing regions by heritage ended, with labels for North America, Europe, Asia, and Australia. The bottom visualization, 'Year Forecasting of Heritages', is a line chart showing the year forecasting of heritages, with a y-axis labeled 'Danger' and an x-axis labeled 'Year Forecasted'.
4.	Calculation fields Used	Year Extracted from Date_inscribed • Count of Sites by Country • Danger Flag Conversion for Pie Chart (IF [Danger] = 'Yes' THEN 'In Danger' ELSE 'Not in Danger') • Region-wise Risk Rate: $\text{SUM}(\text{IF} [\text{Danger}] = \text{'Yes'} \text{ THEN } 1 \text{ ELSE } 0) / \text{COUNT}([\text{Name_en}])$ • Decade of Inscription: $\text{INT}(\text{YEAR}([\text{Date_inscribed}]) / 10) * 10$ • Country-wise Site Percentage: $(\text{COUNTD}([\text{Name_en}]) / \text{TOTAL}(\text{COUNTD}([\text{Name_en}]))) * 100$

5.	Dashboard design	No of Visualizations / Graphs – 8 No of Dashboards designs- 2
----	------------------	--

6	Story Design	No of Visualizations / Graphs -8 No of Story Design- 1
